Aerospace

Introduction

ONTOLOGIES

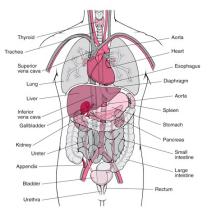

Ontologies are formal descriptions of domains such as:

ONTOLOGIES

- Ontologies are formal descriptions of domains such as:
 - Aerospace
 - Cellular biology
 - Human anatomy

ONTOLOGIES

- Ontologies are formal descriptions of domains such as:
 - Aerospace
 - Cellular biology
 - Human anatomy
 - Drugs

< 一型

ONTOLOGIES

- Ontologies are formal descriptions of domains such as:
 - Aerospace
 - Cellular biology
 - Human anatomy
 - Drugs
- Applications:

< 17 >

ONTOLOGIES

- Ontologies are formal descriptions of domains such as:
 - Aerospace
 - Cellular biology
 - Human anatomy
 - Drugs
- Applications:
 - Automated decision support

ONTOLOGIES

- Ontologies are formal descriptions of domains such as:
 - Aerospace
 - Cellular biology
 - Human anatomy
 - Drugs
- Applications:
 - Automated decision support
 - Reference databases

ONTOLOGIES

- Ontologies are formal descriptions of domains such as:
 - Aerospace
 - Cellular biology
 - Human anatomy
 - Drugs
- Applications:
 - Automated decision support

ONTOLOGY AXIOMS

Terms describe entities from specific domains, e.g. for a drug ontology:

ONTOLOGY AXIOMS

Terms describe entities from specific domains, e.g. for a drug ontology:

Paracetamol

< 17 ▶

ONTOLOGY AXIOMS

Terms describe entities from specific domains, e.g. for a drug ontology:

- Paracetamol
- Patient

A (10) A (10) A (10)

- Terms describe entities from specific domains, e.g. for a drug ontology:
 - Paracetamol
 - Patient
 - A drug that contains 500 mg of paracetamol per tablet

< 17 > <

Terms describe entities from specific domains, e.g. for a drug ontology:

- Paracetamol
- Patient
- A drug that contains 500 mg of paracetamol per tablet
- A patient who has age less than 6 years

< 17 ×

Terms describe entities from specific domains, e.g. for a drug ontology:

- Paracetamol
- Patient
- A drug that contains 500 mg of paracetamol per tablet
- A patient who has age less than 6 years

Axioms formulate properties and restrictions using terms:

Terms describe entities from specific domains, e.g. for a drug ontology:

- Paracetamol
- Patient
- A drug that contains 500 mg of paracetamol per tablet
- A patient who has age less than 6 years
- Axioms formulate properties and restrictions using terms:
 - Panadol is a drug.

Terms describe entities from specific domains, e.g. for a drug ontology:

- Paracetamol
- Patient
- A drug that contains 500 mg of paracetamol per tablet
- A patient who has age less than 6 years
- Axioms formulate properties and restrictions using terms:
 - Panadol is a drug.
 - Panadol contains paracetamol.

Terms describe entities from specific domains, e.g. for a drug ontology:

- Paracetamol
- Patient
- A drug that contains 500 mg of paracetamol per tablet
- A patient who has age less than 6 years

Axioms formulate properties and restrictions using terms:

- Panadol is a drug.
- Panadol contains paracetamol.
- Panadol contains 500 mg of paracetamol per tablet.

Terms describe entities from specific domains, e.g. for a drug ontology:

- Paracetamol
- Patient
- A drug that contains 500 mg of paracetamol per tablet
- A patient who has age less than 6 years
- Axioms formulate properties and restrictions using terms:
 - Panadol is a drug.
 - Panadol contains paracetamol.
 - Panadol contains 500 mg of paracetamol per tablet.
 - [A patient who has age less than 6 years] should not be prescribed anything which [contains more than 250 mg of paracetamol per tablet].

DESCRIPTION LOGICS

Formally describe axioms:

EXAMPLE

 $\begin{array}{l} \mbox{Panadol}\sqsubseteq\mbox{Drug}\\ \mbox{Panadol}\sqsubseteq\mbox{dcontains.Paracetamol}\\ \mbox{Panadol}\sqsubseteq\mbox{dcontains.(Paracetamol \square $]mgPerTablet.[= 500])\\ \mbox{Patient} \square $]msAge.[< 6] \square $]msPrescription.\\ $]contains.(Paracetamol \square $]mgPerTablet.[> 250]) \sqsubseteq \bot $] \label{eq:scalar}$

< 同 > < 三 > <

DESCRIPTION LOGICS

Formally describe axioms:

EXAMPLE

Panadol \sqsubseteq \exists contains.(Paracetamol $\sqcap \exists$ mgPerTablet.[= 500]) Patient $\sqcap \exists$ hasAge.[< 6] $\sqcap \exists$ hasPrescription.

 \exists contains.(Paracetamol $\sqcap \exists$ mgPerTablet.[> 250]) $\sqsubseteq \perp$

Atomic concepts

A (10) A (10)

DESCRIPTION LOGICS

Formally describe axioms:

EXAMPLE

Panadol \sqsubseteq Drug Panadol \sqsubseteq \exists contains.Paracetamol Panadol \sqsubseteq \exists contains.(Paracetamol \sqcap \exists mgPerTablet.[= 500]) Patient \sqcap \exists hasAge.[< 6] \sqcap \exists hasPrescription. \exists contains.(Paracetamol \sqcap \exists mgPerTablet.[> 250]) \sqsubseteq \bot

Atomic concepts

Atomic roles

DESCRIPTION LOGICS

Formally describe axioms:

EXAMPLE

 $\begin{array}{l} \mbox{Panadol}\sqsubseteq\mbox{Drug}\\ \mbox{Panadol}\sqsubseteq\mbox{dcontains.Paracetamol}\\ \mbox{Panadol}\sqsubseteq\mbox{dcontains.(Paracetamol \square $]mgPerTablet.[=500]$)}\\ \mbox{Patient} \square $]msAge.[<6] \square $]msPrescription.\\ $]contains.(Paracetamol \square $]mgPerTablet.[>250]$) \sqsubseteq \bot $] \label{eq:scalar}$

- Atomic concepts
- Atomic roles
- Datatype restrictions

DESCRIPTION LOGICS

Formally describe axioms:

EXAMPLE

Panadol \sqsubseteq Drug Panadol \sqsubseteq and the contains. Paracetamol Panadol \sqsubseteq acontains. (Paracetamol \square and PerTablet. [= 500]) Patient \square and a structure and \square and a structure and the contains. (Paracetamol \square and PerTablet. [> 250]) $\sqsubseteq \bot$

- Atomic concepts
- Atomic roles
- Datatype restrictions
- Concept constructors

DESCRIPTION LOGICS

Formally describe axioms:

EXAMPLE

 $\begin{array}{l} \mbox{Panadol}\sqsubseteq\mbox{Drug}\\ \mbox{Panadol}\sqsubseteq\mbox{dcontains.Paracetamol}\\ \mbox{Panadol}\sqsubseteq\mbox{dcontains.(Paracetamol \square $]mgPerTablet.[= 500])\\ \mbox{Patient} \square $]msAge.[< 6] \square $]msPrescription.\\ \square $]contains.(Paracetamol \square $]mgPerTablet.[> 250]) \sqsubseteq \bot $] \label{eq:scontains} \label{eq:scontains}$

- Atomic concepts
- Atomic roles
- Datatype restrictions
- Concept constructors
- Foundations of W3C ontology languages (OWL and OWL 2)

(I)

DESCRIPTION LOGICS REASONING

EXAMPLE

Panadol \sqsubseteq \exists contains.(Paracetamol $\sqcap \exists$ mgPerTablet.[= 500])

Patient $\sqcap \exists hasAge.[< 6] \sqcap \exists hasPrescription.$ $\exists contains.(Paracetamol \sqcap \exists mgPerTablet.[> 250]) \sqsubseteq \bot$

DESCRIPTION LOGICS REASONING

EXAMPLE

Panadol \sqsubseteq \exists contains.(Paracetamol $\sqcap \exists$ mgPerTablet.[= 500])

Patient $\sqcap \exists hasAge.[< 6] \sqcap \exists hasPrescription.$ $\exists contains.(Paracetamol \sqcap \exists mgPerTablet.[> 250]) \sqsubseteq \bot$

Can Panadol be prescribed to a 3-year-old patient?

DESCRIPTION LOGICS REASONING

EXAMPLE

Panadol \sqsubseteq \exists contains.(Paracetamol $\sqcap \exists$ mgPerTablet.[= 500])

Patient $\sqcap \exists hasAge.[< 6] \sqcap \exists hasPrescription.$ $\exists contains.(Paracetamol \sqcap \exists mgPerTablet.[> 250]) \sqsubseteq \bot$

 $X \equiv Patient \sqcap \exists hasAge. [= 3] \sqcap \exists hasPrescription. Panadol$

- Can Panadol be prescribed to a 3-year-old patient?
 - Is X satisfiable?

DESCRIPTION LOGICS REASONING

EXAMPLE

Panadol \sqsubseteq \exists contains.(Paracetamol $\sqcap \exists$ mgPerTablet.[= 500])

Patient $\sqcap \exists hasAge.[< 6] \sqcap \exists hasPrescription.$ $\exists contains.(Paracetamol \sqcap \exists mgPerTablet.[> 250]) \sqsubseteq \bot$

 $X \equiv Patient \sqcap \exists hasAge. [= 3] \sqcap \exists hasPrescription. Panadol$

- Can Panadol be prescribed to a 3-year-old patient?
 - Is X satisfiable?
- DL reasoning tasks:
 - Check satisfiability of a concept ($\mathcal{O} \models \mathsf{X} \sqsubseteq \bot$)
 - Check satisfiability of an ontology ($\mathcal{O} \models \bot$)
 - Check subsumption ($\mathcal{O} \models \mathsf{A} \sqsubseteq \mathsf{B}$)
 - Classification (compute all A ⊆ B such that O ⊨ A ⊆ B) → more general than all tasks above

${\cal EL}$ and datatypes

• \mathcal{EL} [Baader et al., IJCAI 2005] is a simple DL:

• uses \sqcap and \exists :

 $Panadol \equiv Drug \sqcap \exists contains. Paracetamol$

- suitable for large-scale ontologies such as SNOMED or GO
- reasoning in PTIME

${\cal EL}$ and datatypes

• \mathcal{EL} [Baader et al., IJCAI 2005] is a simple DL:

• uses \sqcap and \exists :

 $Panadol \equiv Drug \sqcap \exists contains. Paracetamol$

- suitable for large-scale ontologies such as SNOMED or GO
- reasoning in PTIME
- *EL* with datatypes is EXPTIME-complete. Why?

${\cal EL}$ and datatypes

- \mathcal{EL} [Baader et al., IJCAI 2005] is a simple DL:
 - uses □ and ∃:

 $Panadol \equiv Drug \sqcap \exists contains. Paracetamol$

- suitable for large-scale ontologies such as SNOMED or GO
- reasoning in PTIME
- *EL* with datatypes is EXPTIME-complete. Why?
- *EL* extended with disjunction is EXPTIME-complete and disjunction is expressible using datatypes:

${\cal EL}$ and datatypes

${\cal EL}$ and datatypes

- \mathcal{EL} [Baader et al., IJCAI 2005] is a simple DL:
 - uses □ and ∃:

 $Panadol \equiv Drug \sqcap \exists contains. Paracetamol$

- suitable for large-scale ontologies such as SNOMED or GO
- reasoning in PTIME
- *EL* with datatypes is EXPTIME-complete. Why?
- *EL* extended with disjunction is EXPTIME-complete and disjunction is expressible using datatypes:

- Baader et al. [IJCAI 2005] ensure polynomiality by restrictions on datatype use
- EL Profile of OWL 2 admits only equality

\mathcal{EL} and datatypes

- \mathcal{EL} [Baader et al., IJCAI 2005] is a simple DL:
 - uses □ and ∃:

 $Panadol \equiv Drug \sqcap \exists contains. Paracetamol$

- suitable for large-scale ontologies such as SNOMED or GO
- reasoning in PTIME
- *EL* with datatypes is EXPTIME-complete. Why?
- *EL* extended with disjunction is EXPTIME-complete and disjunction is expressible using datatypes:

- Baader et al. [IJCAI 2005] ensure polynomiality by restrictions on datatype use
- EL Profile of OWL 2 admits only equality
- Absence of inequalities reduces the utility of OWL 2 EL

RESULTS OVERVIEW

 Relax the restrictions on datatype use by allowing inequalities and remaining polynomial

RESULTS OVERVIEW

Relax the restrictions on datatype use by allowing inequalities and remaining polynomial

Key idea

Distinguish negative (LHS of axiom) and positive (RHS of axiom) occurrences of datatypes

RESULTS OVERVIEW

Relax the restrictions on datatype use by allowing inequalities and remaining polynomial

Key idea

Distinguish negative (LHS of axiom) and positive (RHS of axiom) occurrences of datatypes

Main results

• Full classification of cases where datatypes are used and tractability is preserved for \mathbb{N} , \mathbb{Z} , \mathbb{Q} and \mathbb{R}

RESULTS OVERVIEW

Relax the restrictions on datatype use by allowing inequalities and remaining polynomial

Key idea

Distinguish negative (LHS of axiom) and positive (RHS of axiom) occurrences of datatypes

Main results

- Full classification of cases where datatypes are used and tractability is preserved for \mathbb{N} , \mathbb{Z} , \mathbb{Q} and \mathbb{R}
- Polynomial, sound and complete reasoning procedure for extensions of *EL*[⊥] with restricted numerical datatypes

EXAMPLE

Panadol \sqsubseteq \exists contains.(Paracetamol $\sqcap \exists$ mgPerTablet.[= 500])

Patient $\sqcap \exists hasAge.[< 6] \sqcap \exists hasPrescription.$ $\exists contains.(Paracetamol \sqcap \exists mgPerTablet.[> 250]) \sqsubseteq \bot$

 $X \sqsubseteq$ Patient $\sqcap \exists$ hasAge.[= 3] $\sqcap \exists$ hasPrescription.Panadol

RESULTS OVERVIEW

- Polynomial, sound and complete reasoning procedure for extensions of *EL*[⊥] with "safe" numerical datatypes
- \blacksquare Full classification of tractable cases for $\mathbb{N},\,\mathbb{Z},\,\mathbb{Q}$ and \mathbb{R}
- **Common restriction** for \mathbb{N} , \mathbb{Z} , \mathbb{Q} and \mathbb{R} :

Negative relations | Positive relations

 $<,>,\geq,=$

EXAMPLE

Panadol \sqsubseteq \exists contains.(Paracetamol $\sqcap \exists$ mgPerTablet.[= 500])

Patient $\sqcap \exists hasAge.[< 6] \sqcap \exists hasPrescription.$ $\exists contains.(Paracetamol \sqcap \exists mgPerTablet.[> 250]) \sqsubseteq \bot$

 $X \sqsubseteq Patient \sqcap \exists hasAge. [= 3] \sqcap \exists hasPrescription. Panadol$

(I)

FUTURE WORK

Extend the reasoning algorithm:

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・

크

FUTURE WORK

- **Extend** the reasoning algorithm:
 - complex role inclusions
 - functional data properties
 - nominals
 - domain and range restrictions
 - Horn SHIQ [Kazakov, IJCAI, 2009]

FUTURE WORK

- **Extend** the reasoning algorithm:
 - complex role inclusions
 - functional data properties
 - nominals
 - domain and range restrictions
 - Horn SHIQ [Kazakov, IJCAI, 2009]

More fine-grained analysis by also considering which data properties are used with relations

FUTURE WORK
